Introduction

Student Management has to handle records for a large number of students and maintenance was difficult. There is a need to upgrade the system with a computer-based information system. This student management system is an automated version of manual Student Management System. Using this system, it secures the activities of the Student Management. The goal of this project is to create a system to maintain the details of students in school. It makes easy to maintain the student details than the manual system. By developing the system, we can attain; easy to handle, feasible, cost reduction and fast. This Student Management system allows authorized person to access the records of registered students.

Background Study

The number of students increases in institutes year by year, manually managing the strength becomes a hard job for the administrator. This computerized system stores all students' details of the pre-school in the database which makes it easy to fetch and update whenever needed. Admin module is the main module of this Student Management System. Admin can manage student details.

There are five functionalities of this Student Management System.

1. Add new student.
2. Display student details.
3. Modify student details.
4. Search student details.
5. Delete student details.
